New User Tutorial

California Cancer Registry

PAQC Unit – UC Davis Health System

Revised March, 2017

Objectives

- Accessing CCRIS
- Login/Register for CCRIS
- View Inquiries
- Search Inquiries
- Print Inquiries
- Update Profile
- Sign Out

Login/Register/Reset Password for CCRIS

- Access CCRIS by:
 - Direct Link: <https://paqc.ccr.ca.gov/>
 - Registry website: <http://www.ccrca.org/index.shtml>
 - Registrar Resources
 - CCR Inquiry System
 - Login to Inquiry System page

The screenshot shows the login page for the California Cancer Registry Inquiry System. At the top, there is a dark blue header with the text "INQUIRY SYSTEM" in white. Below this is a light blue section with the title "California Cancer Registry Inquiry System" and a brief description: "The California Cancer Registry Inquiry System is a centralized collection of inquiries and responses most helpful or frequently asked about issues relating to state reporting of cancer." The main content area is white and contains the "Login to Inquiry System" section. It includes two input fields: "E-mail Address:" and "Password:". Below the password field, there are links for "Register", "Reset Password", and a "Login" button.

Inquiry # 3494 From: 12/1/2011 Submitted by: dletendre@ccr.ca.gov Quick Search ID: Lookup Inquiry Text: View Results

 **Category:** **Site:** **Inquiry Region:**

Inquiry:

Pt is diagnosed 3/19/04 with extramammary Paget's disease of the vulva with no invasion. FDX is VIN III. In 2006 the pt presents with diffuse mets to the spinal column and has a positive FNA of a groin lymph node - pos for malign cells, consistent with PD adenoca. In 11/2010 pt presents with brain mets at another facility. In reading the text of the 2006 and 2010 Admissions, both Admissions seem to be assuming that vulva is the primary.

Should the 3/04 Admission stage be changed from in situ to localized?

Inquiry Scenario:

Patient ID: **Admission ID:**

Response:

Report as two separate primaries.
1: Extramammary Paget's Disease of vulva with final dx of VIN III.
2: Poorly differentiated adenocarcinoma.

The WHO Classification Tumours of the Breast and Female Genital Organs states in women with vulvar Paget's Disease, 10-20% will have an invasive squamous component or an underlying skin appendage adenocarcinoma.
